

Winds of Change

29th June 2018, Motilal Oswal Tower, Mumbai

As the business environment changes, so must underlying processes. Two innovations that hold the promise to reshape our world are Digitalization and Electric Vehicles. Digitalization will transcend companies to the future and as India hurtles towards a more sustainable future, the end users are racing to switch to all-electric cars.

We bring you a host of companies and experts that have already latched on to the roller coaster ride that these disruptions may bring forth. Come share their perceptions of a new world and position yourself for the Winds of Change.

We welcome your meeting interest!
